RockWild Engineering Press Release

RockWild engineering is expanding its wings in rockcrawling

February 8, 2008 Wichita, KS - Professional rockcrawling team, RockWild Engineering, is proud to announce that the team will be not only competing in the RROCK Series in 2008, but will also be adding the XRRR East Series to their schedule!

Coming off of 2007 tied for 3rd in the modified stock class in the RROCK Series, RockWild is excited to start another chapter in their racing history. Driver, Travis Snider decided to build a buggy to compete in XRRR! With the help of spotter, Erin Lachman, our partners and the sweat of a few friends we are making outstanding progress. RockWild is evolving into a professional team that is a definite threat on the course.

Driver, Travis Snider - "I'm excited to try something new, having a purpose built reliable buggy that I can just let loose on is what I've been waiting for and why we've been working so hard." The RockWild Engineering buggy will rock your world! With its unique design and versatility it will provide great entertainment for both the team and spectators. 2008 partners that have helped make this happen are: T-max winches, Inner Airlock, Tom Woods Custom Drive Shafts, Downsouth Motorsports and M & P Trailer and Truck Bodies.

Spotter, Erin Lachman - "Travis and I are making excellent progress and look forward to putting on an excellent show in 2008 in both series." The RockWild buggy will make its competition debut on April 19th, 2008 at the first race in the XRRR Eastern Division in Gray Rock, AL. Getting used to the new rig will take time and the team is working feverishly to finish and start practicing to ensure a good showing at the 2008 events.

Don't forget about Rockwild's modified stock Toyota!! The team is looking forward to having another great year running the RROCK series in Hannibal, MO. With 3 years of seat time and teamwork, the bugs have been worked out and the team is aiming high with sights set on first place in the mod stock series!

The team has also set the bar high for excitement and crowd involvement at the events. RockWild will be debuting a CO2 cannon that will launch RockWild apparel to the masses!!! There are four different designs to choose from for the front, with our partners listed on the back thanking them for all their support. These are all available in a multitude of colors as well as long sleeve, hoodies and stickers!

Sure it's safe

I welder'd it myself

I want to try something

Drive like you got a set!

Build it...

Wheel it...

Break it...

Fix it...

Do it again
